

AIPI - TECHNICAL HOSTING REQUIREMENTS

CRITICAL COMPATIBILITY WARNING

AIPI AI widgets require specific hosting resources to function properly.

IMPORTANT: Not all hosting plans are compatible.

85% of performance issues are due to inadequate hosting.

DOCUMENTED INCOMPATIBILITY CASES

HostGator - Shared Plans (ALL INCOMPATIBLE):

- Personal Plan: 25% CPU maximum, 30s timeout
RESULT: Confirmed freezing on mobile devices
- Business Plan: SAME limitations as Personal
RESULT: NO performance improvement
- Baby Plan: Identical restrictions to above
RESULT: Guaranteed problems

Common Symptoms Identified:

- Freezing during registration from mobile devices
- Messaging timeouts exceeding 30 seconds
- Automatic CPU throttling when widget operates
- Slow AI responses in complex operations
- Intermittent failures during high load periods

MINIMUM TECHNICAL REQUIREMENTS

CPU: No 25% limit (access equivalent to 1 core)

RAM: 1GB available guaranteed

PHP: Version 8.0+ with 120 seconds timeout minimum

Database: MySQL 5.7+ or PostgreSQL 12+

SSL: Valid certificate (Let's Encrypt is acceptable)

Architecture: LiteSpeed/NGINX (NOT Apache LAMP)

Storage: SSD recommended (HDD acceptable)

Bandwidth: 10GB per month minimum

RECOMMENDED HOSTING PROVIDERS

LOW BUDGET (\$3-5 per month):

- ChemiCloud Starter - Approximately 25,000 visits/month
- SiteGround StartUp - Approximately 10,000 visits/month
- A2 Hosting Lite - Optimized shared resources

MEDIUM BUDGET (\$10-30 per month):

- Cloudways Vultr - 1 core and 1GB dedicated
- Kinsta Starter - Up to 25,000 visits per month

- WP Engine Personal - Up to 25,000 visits per month

COMPATIBILITY VERIFICATION CHECKLIST

Before implementing AIPI widgets, verify:

1. VERIFY: Your hosting does NOT have 25% CPU limit
2. CONFIRM: PHP timeout is \geq 120 seconds
3. VALIDATE: Architecture is LiteSpeed/NGINX (not Apache LAMP)
4. ENSURE: Valid SSL certificate is active
5. REVIEW: Available RAM memory limits

IMPORTANT DISCLAIMER

Shared hosting plans do NOT guarantee specific CPU/RAM allocations.

Specifications shown are approximate traffic limits they can handle.

Resources are shared dynamically among all server users.
